## Experience

**Stripe** - Software Engineer, Seattle, WA — June 2022 - Nov 2022

- Worked on credit card clearing to ensure Stripe and its merchants received funds timely and reliably, and shipped transaction holds in Stripe's next generation Java stack
- Investigated and resolved numerous gnarly merchant facing race conditions, reduced the p99 latency of a major Kafka consumer by 85%, and greatly alleviated the team's run burden by automating away common and repetitive tasks and building better tooling
- Collaborated closely with Stripe's partners like Mastercard to resolve clearing issues and responded effectively to incidents with urgency, ensuring the integrity of Stripe's financial position and accounting
- Received positive feedback from teammates for extremely fast spin-up and high productivity

**Stripe** - Software Engineer Intern, U.S. Remote — Summer 2020 & 2021

- Migrated a backend service to gRPC in production, proving the correctness of the new gRPC service through rigorous tests and demonstrating a p99 latency reduction of 80% using metrics and detectors on SignalFx
- Accomplished the gRPC migration in production with zero downtime as part of the Account Services team, in support of Stripe's move towards a microservices architecture built upon Java
- Built a tax data computation pipeline using Scala, Spark, and Airflow as part of the Tax Reporting team
- Implemented a user facing 1099 data export API despite numerous scaling challenges
- Consistently pushed for the most user-friendly implementation, performed high quality, rigorous, and actionable code reviews, achieving all internship project targets including stretch goals in both years

**Open Government Products** - Software Engineer Intern, Singapore — Feb 2019 – Aug 2019

- Worked closely with engineers and PMs on products for the public good, specifically Isomer and go.gov.sg, reducing the cost on taxpayers for the government to develop and launch new websites by over 90%
- Engaged in rapid prototyping and testing of new features, initiated and completed a code rewrite of Isomer, significantly improving its usability, reducing user questions and confusion

## Education

**B.S., Electrical & Computer Engineering** - Carnegie Mellon University — Aug 2019 – May 2022

- Served as a teaching assistant for 15-441 (Computer Networks), and excelled in the role as lead TA for Project 2: implementing TCP including the 3-way handshake, reliable transmission, and flow control
- Other coursework completed include 18-349 (Embedded Systems), 18-344 (The Hardware/Software Interface), 18-330 (Computer Security), and their prerequisites. Achieved an overall GPA of 3.85
- Graduated 1 year early in May 2022 due to AP credits and consistently rigorous courseloads
